Fakaofo atoll profile: 2016 Tokelau Census of Population and Dwellings
Information about the data

Comparing information between censuses

The Tokelau population has a unique composition. A significant proportion of the population temporarily leaves the islands (e.g., for healthcare, education). In 2016, core demographic information for people who usually live in Tokelau but were away on census night was provided on their behalf by the head of the household. More detailed information was provided by each individual present on Tokelau on census day.

It should be noted that comparison of absentee numbers over the two censuses should be used cautiously when being used for analysis as the number of people absent from Tokelau at any one time can fluctuate substantially. Appropriate population measures were developed for the 2006 Tokelau Census of Population and Dwellings to ensure all usual residents were counted—including those who were not present in Tokelau on census night. The population determination methodology was repeated for 2016.

Users of Tokelau census data can be confident about comparing census data between the 2006, 2011, and 2016 Censuses. However, final population and dwelling count comparisons are not recommended before 2006. Inconsistencies in collection methodology and population count calculations mean data from censuses earlier than 2006 is not directly comparable with 2016 Census data.

Rounding procedures

Percentages are rounded to one decimal place.

Confidentiality

Statistics NZ and the Tokelau National Statistics Office have used confidentiality rules to process the data in this profile. This means that no individuals can be identified from the data.

For more information on confidentiality, please contact the Tokelau National Statistics Office.

Multiple response variables

Some variables in the 2016 Tokelau Census allowed respondents to indicate more than one response to a question (e.g., ethnicity, and where people have lived overseas). For these variables, counts and percentages will not add up to the totals reported in tables.

Source

Statistics NZ and the Tokelau National Statistics Office were the source of the information in this profile. All data is from the 2016 Tokelau Census of Population and Dwellings.

More detail

For more information about the population counts, see appendix.

1. Introduction

Fakaofo is one of the three atolls in Tokelau. *Fakaofo atoll profile* is one of a series prepared by the Tokelau National Statistics Office and Statistics NZ for each of the atolls of Tokelau. This profile is based on the 2016 Tokelau Census of Population and Dwellings held on 18 October 2016.

The atoll profiles provide basic comparisons between an atoll and Tokelau as a whole but do not compare the atolls with one another.

If you would like to know more about a topic found in the profile, please refer to one of the more detailed census reports available from the Tokelau National Statistics Office.

Information on the other Tokelau census reports is at the end of this profile under Further information.
2. Fakaofo population

On 18 October 2016, Fakaofo had a population of 506 people. This was a 0.8 percent decrease from the 2011 Census when Fakaofo had a population of 510.

Fakaofo was home to 34.0 percent of Tokelau's total population.

Fakaofo's population, shown in figure 1, was made up of:

- 399 usual residents who were in Tokelau on census night
- 85 usual residents who were away from Tokelau on census night
- 22 Tokelau Public Service (TPS) employees and their immediate families who are currently based in Apia, Samoa, but whose home atoll is Fakaofo.

Within Fakaofo, 17.6 percent of the population were absent from Tokelau on census night. This was almost exactly the same as the total proportion absent across Tokelau (17.5 percent). These percentages do not include TPS employees and their immediate families based in Apia.

**De jure usually resident population**

Tokelau’s de jure population includes people who usually live in Tokelau but were absent on census night. See the appendix for a detailed definition.

The de jure population for Tokelau in 2016 was 1,499. This includes the usually resident population present in Tokelau on census night (1,197 people) and the usually resident absentee sub-population (302 people).

This sub-population of absentees includes those who qualify as usual residents under specific immigration criteria. Tokelau’s sub-population of absentees is made up of 48 TPS employees and their immediate families counted in Apia, Samoa, and 254 other international absentees.
One-third of Tokelau’s population live on Fakaofo

On census night, 399 usual residents of Fakaofo were present in Tokelau. This was an 11.1 percent decrease from 2011, when 449 usual residents were in Tokelau on census night.

In Tokelau, 1,197 people on census night qualified as usual residents under the specified criteria (excluding overseas visitors).

Age and sex distribution

Figure 2 shows the age and sex characteristics of Fakaofo’s population. The figure shows the following details.

- Fakaofo has a very youthful population – 33.1 percent of its population were under 15 years of age and 60.7 percent were under 30 years.
- Only 11.3 percent of the population were aged 60 years or older; only 3.8 percent were 70 years or older.
- The numbers of males and females in each age group were relatively similar. The main differences were in the 0–4 and 25–29 age groups which both had a greater number of females.

Source: 2016 Tokelau Census of Population and Dwellings
### 3. Absentees

Fakaofo had a total of 85 absentees on census night (this excludes the TPS employees and their immediate families in Samoa). This was more than double the number of absentees (41) from 2011.

Of Fakaofo’s absentees, 50 were under 30 years and only five were 60 years or older. The most absentees (13) were in the 20–24 age group.

Slightly more female (45) than male (40) Fakaofo residents were absent from Tokelau on census night.

1. Usually resident population absent from Tokelau on census night.
4. Migration

Most residents born in Fakaofo

Of Fakaofo's usual residents, 51.4 percent were born in Fakaofo, and 5.8 percent were born elsewhere in Tokelau. The other most common places residents were born in were Samoa (17.0 percent) and New Zealand (11.8 percent).

Fakaofo had a greater proportion of residents born in Samoa compared with the whole of Tokelau (15.3 percent).

Figure 6

![Place of birth for Fakaofo and Tokelau residents](image)

2. Percentages that are less than 1 percent do not show on the graph.

Source: 2016 Tokelau Census of Population and Dwellings.

Most residents were on Fakaofo five years ago

Only a few Fakaofo residents were not living in Tokelau five years ago. 75.4 percent of residents who were on Fakaofo five years ago. This was greater than the proportion of people from the whole of Tokelau who stated they were on their atoll of usual residence (67.6 percent) five years ago. A further 8.2 percent of residents reported being elsewhere in Tokelau.
Of Fakaofo residents not on Fakaofo five years ago, most of them were in New Zealand (7.4 percent).

**Figure 7**

Note: Percentages that are less than 1 percent do not show on the graph.  
Source: 2016 Tokelau Census of Population and Dwellings.

Over half of Fakaofo residents had lived overseas for at least six months

Of Fakaofo’s residents who were at least five years old, 53.2 percent had lived somewhere overseas for at least six months. The proportion of Fakaofo residents who had lived overseas is slightly lower than the proportion for the whole of Tokelau (59.2 percent).

The greatest number of residents had lived in New Zealand (125 people). Other common places residents had lived were Samoa (47 people), another Pacific island (45 people), and Australia (37 people).
5. Social profile

Only 7 percent of residents cannot speak Tokelauan

On Fakaofo, 92.7 percent of residents could have an everyday conversation in Tokelauan. The proportion of Fakaofo residents that can speak Tokelauan is higher than the proportion of the total Tokelauan population (88.8 percent).

The proportion of Fakaofo residents who reported that they can have an everyday conversation in English decreased almost 20 percent in the last five years, from 65.0 to 47.6 percent.

The most common languages people said they could speak is shown in table 3.

Tokelauan spoken most often

85.7 percent of Fakaofo residents said that they spoke Tokelauan most of the time.
14.3 percent of Fakaofo residents did not speak Tokelauan most often. English was the second most often spoken language (5.5 percent of residents).

Most residents are full-Tokelauan

The majority of Fakaofo residents reported their ethnicity as being full-Tokelauan, and 14.0 percent identified as part-Tokelauan. Table 5 shows the percentages for the most common ethnic group combinations for Fakaofo residents.

</table>

Over half of Fakaofo adults are married

On census night, 55.7 percent of adults on Fakaofo 15 years or older were married. The rate in Fakaofo is similar to the marital rate for all of Tokelau (58.2 percent). The proportion of Fakaofo residents who had never been married was 38.3 percent.

Over half of Fakaofo adults smoke regularly

On Fakaofo, 51.9 percent of adults 15 years or older said they smoked regularly, an increase from the 2011 Census (43.1 percent).

Of those who did not smoke, 20.5 percent reported they had previously been a regular smoker.
6. Quality of life

Most residents had high levels of life satisfaction

Residents, 15 years and over, were asked to report their level of life satisfaction on a rating scale, with 0 being completely dissatisfied with their life and 10 being completely satisfied with their life. In Fakaofo, 69.7 percent of residents rated their life satisfaction as 8 or higher, which is slightly lower than the percentage for the whole of Tokelau (71.3 percent). Only 3.0 percent of Fakaofo residents gave a rating of 4 or lower which is comparable with the Tokelau population (2.5 percent).

The most common response for Fakaofo was 10. Figure 8 provides the full breakdown of residents’ life satisfaction ratings for Fakaofo and Tokelau.

Figure 8

Life satisfaction\(^{(1)}\) for Fakaofo and Tokelau residents\(^{(2)}\)

</table>
7. Education

Most 3- to 5-year-olds are in early childhood education

For the first time, information on early childhood education was collected in the census. Of those Fakaofo residents who were aged between three and five years old, 85.2 percent were attending early childhood education at the time of the census.

Years 10–11 most common year levels reached by adults at school

Adults 15 years and over were asked what year level they reached at secondary school. 39.7 percent of Fakaofo residents had reached years 10-11.

36.0 percent of Fakaofo residents reached year 12-foundation level, which are the highest year levels that could be reached at school. The proportion of residents who reached year 12-foundation is slightly lower than for the whole of Tokelau (42.2 percent).

On Fakaofo, 7.5 percent of residents said they only reached up to year 6. The proportion in Fakaofo who only reached year 6 was higher than the percentage for all of Tokelau, at 5.7 percent.

Over one-third of Fakaofo residents have no school qualification

When looking at people’s highest qualifications, the most common response for Fakaofo residents was no school qualification (36.7 percent). This was greater than the proportion of the whole of Tokelau (27.3 percent).

On Fakaofo, 33.7 percent of adults stated their highest qualification was a school qualification. 8.6 percent had gained a university qualification (bachelor’s degree, post-graduate degree, or other university qualification).

There were 5.2 percent of residents who were still studying for their first post-school qualification.

It is important to note that several people were absent from Fakaofo to gain further education. This is evident from schooling/education being the most common reason for people’s absence on census night.
Figure 9

Percent

1. For usually resident population present in Tokelau on census night.

Source: 2016 Tokelau Census of Population and Dwellings
8. Labour force

On census night, there were 152 adults (57.5 percent) from Fakaofo, 15 years or older, who were in paid work. This compares with 59.8 percent of adults in all of Tokelau.

Most people employed as labourers, agriculture, and fisheries workers

On Fakaofo, 44.1 percent of people who work for pay are employed as labourers, agriculture and fisheries workers. This group includes people working as:

- village workers
- foremen
- machine operators
- drivers
- cleaners/porters.

The second most common occupation group was professionals (30.9 percent). The proportion of professionals in Fakaofo was slightly lower than in Tokelau as a whole (32.8 percent).

Professionals include people working as:

- doctors, dentists, dental nurses, or nurses
- teachers
- police officers
- finance officers, education officers, or environment officers.

Slightly more technicians were in Fakaofo (13.2 percent) than in all of Tokelau (12.8 percent).
Over 80 percent of adults in Fakaofo do unpaid work

Unpaid work is a major part of Tokelau’s culture. In Fakaofo, 83.7 percent of residents indicated they were involved in some kind of unpaid work. This is higher than the percentage for all of Tokelau (79.2 percent).

Fakaofo men and women do different types of unpaid work.

- Women are more likely to care for children, whether they are their own children or someone else’s.
- Women are more likely to be involved in village weaving, cleaning, and making cloth, garments, mats, or handicrafts.
- Men are more likely to be involved in building or repairing boats and village fishing.

Similar numbers of men and women are involved with helping family or other relatives.

Various types of unpaid work are done in Tokelau. Table 7 shows the most common types of unpaid work on Fakaofo.
Table 7

Most common types of unpaid work on Fakaofo

<table>
<thead>
<tr>
<th>Type of unpaid work</th>

</tbody>
</table>

For most of the various types of unpaid work that were asked about, Fakaofo had a higher proportion of residents who did them compared to the whole of Tokelau. Only two types of unpaid work (village weaving and village fishing) were more common in the whole of Tokelau than in Fakaofo.

Figure 11

Types of unpaid work done by Fakaofo residents

1. For the usually resident population present in Fakaofo on census night, aged 15 years and over, who carried out unpaid work in the seven days before census day.

Source: 2016 Tokelau Census of Population and Dwellings
9. Housing

Most households had three occupants

On census night, the most common number of people living in a household was three (21.2 percent of households). The average (mean) number of occupants was 4.6, this is similar to the overall Tokelau average of 4.7 occupants per household on Census day.

On Fakaofo:

- 49.4 percent of households had four or more occupants, slightly lower than the whole of Tokelau (56.9 percent)
- 14.1 percent of households had eight or more occupants, compared with 14.5 percent of all households in Tokelau
- the greatest number of occupants in a household was 20.

Figure 12

**Number of occupants per dwelling for Fakaofo and Tokelau**

2016 Tokelau Census

1. For private occupied dwellings.

Source: 2016 Tokelau Census of Population and Dwellings
Almost half of Fakaofo households had ‘enough money’

Households were asked how their income met their everyday needs. The most common response on Fakaofo was that they had ‘enough money’ (45.9 percent). A further 4.7 percent of households said they had ‘more than enough’ money.

Table 8

Few Fakaofo households had outdoor toilet and shower facilities

Over one-fifth of Fakaofo households (22.4 percent) reported that their main toilet facility was outside the dwelling. This was similar to the proportion for the whole of Tokelau (21.6 percent).

On Fakaofo, 49.4 percent of households had their main shower facility outside the dwelling. This was slightly higher than 47.1 percent of all dwellings in Tokelau.

Most households own freezers and telephones

The most common items owned by Fakaofo households were freezers (95.3 percent) and telephones (91.8 percent). These ownership rates were higher than the whole of Tokelau, where 92.6 percent owned freezers and 86.0 percent owned telephones.

Over half of Fakaofo households had access to the internet

On Fakaofo, 51.8 percent of households had access to the internet in some form. This was similar to the rate for all of Tokelau (53.1 percent). Internet access includes internet purchased privately, public access, or some other kind of access (eg through a neighbour’s router).

Fakaofo actually saw a decline in internet access between 2011 and 2016, with 57.6 percent of households having access to the internet in 2011.

Appendix: Population count definitions

De jure usually resident population
This population count includes the usually resident population present in Tokelau on census night plus usual residents who are temporarily overseas at the time of the census. Those temporarily overseas include Tokelauan employees of the Tokelau Public Service based in Apia and their immediate families and usual residents who are temporarily overseas.

Usually resident population present in Tokelau on census night
The usually resident population present in Tokelau on census night is a count of all people who usually live in Tokelau on census night.

This count excludes visitors from overseas and excludes residents who are temporarily overseas on census night. Residents who are in Tokelau and were away from their usual address (ie another atoll) on census night are counted as part of the population of the atoll where they usually live.

While the other population counts provide national and atoll population counts, the usually resident population present in Tokelau on census night will be of most use to analysts and policymakers as it provides the widest range of information. The full set of census information was collected for these respondents, as they were present on census night.

Other population counts contain only limited information provided on behalf of absentees.

Data in chapters 4 to 8 in this report use the usually resident population present in Tokelau as the base for analysis.
